

Safety underfoot with new **Altro** designs

Two new Altro safety floors have joined our resilient range this month. Altro Wood Safety and Altro Walkway 20 each provide safety, hygiene and eco-benefits, and they're ideal for contract environments – including schools, nursing homes, leisure and retail environments. The combined ranges include 58 design options, which are all available from our extensive stock, for standard two-day delivery or next day by request.

Altro Wood Safety is a robust, heterogeneous vinyl sheet product with a 0.7mm wear layer. It has an R10 and TRRL \geq 36 slip rating classification, which is retained throughout its lifecycle, and it's available in 16 timber designs – from Bleached Oak to Walnut Noir. Altro Walkway 20 is a 2mm safety floor offered in 42 colours, including bright and subtle shades, and decorative chipped designs. It also achieves \geq 36 on the pendulum test, giving sustained slip resistance throughout its lifetime.

Both products are free from phthalate plasticisers; benefit from integrated Altro Easyclean Maxis PUR Technology – for easy maintenance and colour retention – and have an A+ BRE Generic Green Guide Rating for Safety Flooring. They are offered alongside our wide variety of accessories, including screeds, adhesives, tools and workwear.

Tilemaster floor prep systems join T&R range

Two new floor-levelling compounds have joined our growing range of floor prep products. Fast-setting Tilemaster Fineflow 3000 and Levelflex will be available from stock, for standard two-day delivery or next day by request.

Tilemaster Fineflow 3000 is a heavy-duty product that's designed for a large variety of substrates, including floors with underfloor heating systems. The fast-drying, free flowing screed is suitable for application depths of 2-20mm in one application. Tilemaster Levelflex is a flexible, fibre reinforced system for application depths of 2-50mm in one application. Its flexible composite makes it ideal for levelling over timber substrates and underfloor heating.

Both systems are protein-free and cement based. Following application, they will take light foot traffic after 2-3 hours and floor coverings can be installed after 24 hours.

Hucknall Sports update

T&R's footie team – Hucknall Sports – has finished fifth in its division, just a few points away from promotion to Division One. It's the boys first season playing nine-a-side and they've got off to a great start, with more tournaments coming up over the summer.

The team's management will be staying with the team, as they progress throughout junior football – and T&R will continue to sponsor both the home and away strips for the duration, and to support them all the way!
